Summary

Highly qualified and enthusiastic professional with over 6 years experience with diversified exposure to a number of technologies while working on a variety of large scale distributed systems. Worked within small and large teams, leveraging communication and interpersonal skills to deliver workloads in accordance with strict deadlines while using a strongly developed ability to solve any problem logically and analytically.

Experience & Work History

Software Engineer

FINEOS Corporation • Dublin, County Dublin
06/2016 - 01/2018

Working in an agile environment on a large J2EE platform which provides software solutions to provide modern customer-centric core software to the life, accident and health industry.

Key Responsibilities:

- Using Java as a core development language, used JavaScript, JSTL, XML, HTML and jQuery as part of the development process along with using technologies such as J2EE, JDBC, JSPs, Hibernate and JUnit and the following Web Services: REST, SOAP, Apache Tomcat, JBoss.
- Creating and modifying creation and upgrade scripts for DB2, SQLServer and Oracles databases.
- Part of team that re-styled the User Interface for the product. This included the introduction of new Java mapping and validations JSP styling tags with specific attributes, functions, validations and stylings that enhanced user experience and user input.
- Developed and introduced a new style Date Range Picker for the FINEOS Admin Suite application using JavaScript and Bootstrap 3 Datetimepicker.
- Developed across the stack to create new web pages, resolve defects, and optimise performance issues using an agile methodology.
- Version control using SVN and Git.
- Investigating and discussing alternative solutions with colleagues.
- Adhere to scheduling and meet deadlines set out as part of product and release plan milestones.

Software Engineer

FINEOS Corporation • Toronto, ON
01/2018 - Present

Transitioned from my role working with the product team to work closely with the client to provide customized solutions and results to meet their individual needs.

Key Responsibilities:

- After relocating to Toronto, I established an independent office on behalf of the company and helped to grow the team by onboarding and assisting new employees in Canada.
- Regular meetings with customer representatives to work in an agile manner to meet their needs and communicate custom solutions.
- Developing solutions while collaborating with subject matter experts and solutions architects.
- Experience with and daily exposure to Amazon Web Services including EC2, S3, CloudWatch & CloudTrail and deploying Docker containers on AWS.
- Managing customer deployments and working closely with Cloud Operations for software releases using Gradle, Jenkins and Amazon Web Services.
- Modified the user interface to meet customer requirements using front-end development languages such as JavaScript, ReactJS, CSS, HTML and JQuery.

- Creating SQL solutions to update and modify customer data.
 - Managing SVN repositories for a joint development environment with engineers working for our customers.
 - Regularly meeting deadlines set by customers for deployments and releases.
 - Implemented custom solutions for clients such as Desjardins, SunLife Financial and Royal Bank of Canada.
-
